

Research for Research: E- Merge tech for Research

Chennai, India.
October 20, 2009

One of the India's biggest Medical University and Research Institute awarded a project to E-Merge tech, a niche player in information Research, Database creation and analytics services. E-Merge tech was a natural choice for the Medical University to execute this 'Research for Research' project.

"This project is of high strategic importance for our university. We have been delaying this important work for want of a Knowledge research organization to do our Work. Well, I had to ask for many professionals to find a service provider. One of the medical professionals, who is also a KOL, suggested to me that E-Merge tech is the right choice", said the Director, Central Research Facility of the medical university.

E-Merge tech's 'Research for Research' work traced the research activity in terms of publications of the Medical University to get insight into their publications and the citations along the years.

The Quality Assurance Department head, who is also the professor of Genetics, has said: "We did not know how to proceed and what deliverables we should get which should be a value addition to our institution. The Project team at E-Merge tech has the ability to understand the need and they have designed the project execution strategy. The finest part is that they listened to

our needs and it was a very engaging and involved exercise".

The Director of the Central Research Facility further added: "E-Merge tech's report is a big morale booster for our faculty and scientists and I am sure there would be more publications in the coming years than ever".

While receiving the report, the Vice chancellor said, "It is an excellent work".

Delighted with the work, the University has now requested E-Merge tech to explore the option of developing an automated tool for various applications in Life Sciences Research Management.

E-Merge tech has a pool of multi disciplinary research specialists. They deep dive into the given subject of domain and spend several thousands of hours of work every week in accessing, researching, and analyzing patent documents, non-patent literatures and technical articles.

E-Merge tech's service spectrum include Patent research, Market research, Competitive Intelligence, KOL identification and profiling, STM database creations and Clinical Data Management services to global customers..
